DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 102

Claims 1-4, 9, 10, and 12 stand rejected under 35 U.S.C. 102(b) as being anticipated by Asamoto (US patent no. 3,945,676).

Asamoto discloses a clamp apparatus having all the claimed features of applicant's invention as illustrated below.

Claim Rejections - 35 USC § 103

Claim 13 stands rejected under 35 U.S.C. 103(a) as being unpatentable over Asamoto'676 in view of Wood III et al (US patent no. 4,934,511). Asamoto disclosed all the claimed features of applicant's invention except for the pad portions are of tubular shape. To provide pad portions of tubular shape are old and well-known in the clamping art. Wood teaches a clamp having tubular member pad portions (109, figure 8) connected to the pivotal arms (107, figure 8) of the clamp. It would have been obvious to one of ordinary skill in the art to have modify the clamp of Asamoto such that the pad portion are of tubular shape as taught by Wood. Such modification would have involved a mere substitution of one well-known pad portion for another which is well within the ambit of one of ordinary skill in the art.

Claims 5-8 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments filed 7/18/2007 have been fully considered but they are not persuasive. Applicant amendment to the claims did not overcome the rejection on sections 102 and 103 based on Asamoto and Asamoto in combination with Wood III. Asamoto does show "during movement **from closed** positions (solid lines as shown below) **to open** positions (dash lines as shown below), the pad portions move in a

Art Unit: 3632

respective directions away from the normal plane (normal plane portion between the two arms) and the medial plane B".

Again applicant's recitation does not overcome Asamoto as illustrated below.

Asamoto's pad portions movement is moving away from the normal plane portion at the seat between the arms and away from the medial plane portion between the arms.

As discussed previously, the medial plane and the normal plane extends through to either side of the pad motion, such that the pad can be said to move away or toward

Art Unit: 3632

the planes from the closed to open or vice versa which says such limitation is meaningless as direction goes and does not overcome Asamoto at all.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
